

GUARDIAN

ALARM • GUARD • MEDICAL MONITORING

We have been using the IRG 1000 since April 2013 to failover our multi location mission critical MPLS network with broadband failover.

Wi-Fi Guy's managed service has been very reliable with exceptional technical support. When we lost an MPLS node for a week at one of our locations due a carrier issue, the failover was successful and we were able to continue to operate.

We highly recommend this managed service in order to provide a solution where high availability is needed.
